

It Takes a Pride of Individuals to SAVE A DOLPHIN

Please join us for the Fifth Annual Ocean River Institute Dinner with Sunshine Wildlife Tours

Saving the Ocean by Reducing Nitrogen Pollution, and Saving Fish and Fishing Communities

Featured Speaker: Rob Moir, Ph.D.,
Director, Ocean River Institute

Also presenting:

Jacqui Thurlow-Lippisch, Commissioner, Town of Sewall's Point
Captain Nancy Beaver, Sunshine WildlifeTours

Discover Indian River Lagoon, the wildlife and wonders of "the most diverse estuary in North America." Learn about our efforts to help injured birds, dolphins and manatees and to assist with oyster restoration, shoreline restoration, and spoil island cleanups. Join with us in calling for a lawn fertilizing holiday from June 1 to September 30th. By using at least 50% slow release nitrogen on lawns in the spring we can stop nitrogen run off pollution during the hottest summer months. Stopping nitrogen run-off will also increase water clarity, reduce harmful algal blooms, save sea grasses, help dolphins suffering from skin-eating fungal infections and clean beaches of slime.

Rob Moir will also speak about the campaign to save fish and fishing communities by increasing government spending on fisheries research and management in support of the fishing councils.

Tuesday, January 28th, 2014 at 6 p.m.
The Miles Grant Country Club
5101 SE Miles Grant Rd., Stuart
